Education

University of Nigeria, Nsukka
B.Sc Computer Science
SEPT 2017 - 2022
Completing 8 semesters towards a degree in computer science.

Skills

Software Development
HTML, CSS, JavaScript, React.js, Jquery, PHP, GSAP, UI improvement, Figma

Personal
Team spirit, Critical thinking, Problem-solving.

Others
Open-source contributor, Community leader, Developer mentor.

Experience

Varscon Ltd. June 2021 - Present
React.js Engineer
    Varscon comprises an eclectic team of professional engineers that handle the **research**, **product design,** and development cycle of **business technology** so that entrepreneurs can focus on business logic and management of their idea while the team at Varscon does the heavy lifting.

On the Varscon team
- I maintained high-level expertise in React state management strategies, including styled components and redux.
- Validated customer interface requirements and assessed the impact of needs on available systems.
- Created mobile applications based on React, integrating Facebook's best practices for interface design.

Interest
Programming, Music, Travelling, Entrepreneurship, Business.

Thoughts

TLDR; I am awesome and you really should hire me!

In my career as a software developer, I have explored many software sectors. Frontend Development, Backend Development, Automation Tools, UI/UX design, etc. I have been able to amass a huge amount of knowledge over the years just for one singular reason, I love adventure. I am passionate about learning new stuff. Something about that is extremely intriguing to me and even though half of the time I don't catch on to the concepts on the first trial, it's always a breeze the next time. It is refreshing to know that I am able to apply my tenacity to software projects I work on and bring a new wind of innovation to what I am working on. Also, my flexibility when it comes to technologies is out of this world. I don't see the syntax, I see patterns and it helps me be able to work out any logic in any framework or the language of choice. You should know that I don't think there is a "perfect" technology stack. I study the systems and see the flaws and the benefits and I decide if they are necessary evils for the particular use case.
